TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go (learning), Java, HTML5, CSS3

Frontend: React, Next.js, Tailwind CSS, Material UI, Bootstrap

State & Data: React Query (TanStack Query), REST APIs, tRPC

Backend: Node.js, Express, Python, Flask, FastAPI, Prisma, Encore

Databases: PostgreSQL, MySQL, MongoDB, Redis

Tools & DevOps: Docker, Git/GitHub, AWS (EC2, S3, Lambda)

RELEVANT EXPERIENCE

Teaching Assistant - Full-stack Development Bootcamp

Research Foundation CUNY | June 2026 - Present

- Debug student code in real time across the full curriculum — HTML/CSS, JavaScript, React, Node.js, Express, PostgreSQL, and REST API design — diagnosing root causes and explaining fixes rather than patching symptoms.
- Deliver targeted one-on-one and small-group instruction across four tracks (full-stack dev, data science/visualization, networking, and systems & security), translating complex topics into practical, approachable explanations.
- Guide student teams through a capstone project from planning to deployment, keeping groups aligned on milestones and unblocking technical challenges in real time.

Full-Stack Developer

Social Content Platform (Confidential) | April 2024 - January 2026

- Owned the platform-wide compliance system end-to-end — age verification, content policy enforcement, PostgreSQL schema design, cross-table migrations on live production data, REST APIs, and an admin dashboard — enabling the platform to meet regulatory requirements for legal operation.
- Architected and implemented a tiered subscription system expanding creators from a single subscription to up to 5 independently priced tiers, enabling content segmentation across audience budgets and reducing all-or-nothing purchasing decisions for subscribers.
- Integrated Stream Chat SDK and built a custom monetized messaging UI enabling creators to set dynamic per-user messaging rates and per-media pricing, creating a revenue stream beyond the SDK's native capabilities.
- Migrated the platform from Plyr.js to Video.js, resolving HLS playback failures affecting ~35% of videos and eliminating a critical seek bug that crashed the site under rapid input, standardizing cross-device video reliability.

Freelance Full-Stack Developer

Self-Employed | 2023 - 2024

- Delivered 5+ consumer-facing web apps for small businesses using React/Next.js/Tailwind, managing the full lifecycle from client requirements to deployment.
 - Built wedding RSVP platform in 4 days handling 200+ guest responses with real-time updates, demonstrating ability to ship quality features rapidly.
-

TECHNICAL PROJECTS

Formalytx – F1 Telemetry Explorer | [GitHub](#) | [Site](#)

- Built a full-stack F1 telemetry dashboard (Next.js/React 19, FastAPI) integrating the FastF1 library across 10+ typed REST endpoints, deployed on Vercel and Railway behind Cloudflare.
- Designed a multi-layer caching strategy — dynamic Cache-Control headers classifying sessions as live (60s), settling (5m), or immutable (1yr) based on race timing — served via Cloudflare edge caching, cutting telemetry response times from ~2.8s to ~170ms (16x).
- Engineered interactive multi-driver comparison charts with ECharts 6, overlaying lap times and per-channel telemetry (speed, throttle, brake, gear) for any F1 session from 2018 to present.

LFG – Social Networking Platform for Gamers | [GitHub](#)

- Built community platform using Python, Flask, Jinja2, and MySQL with user profiles, friend connections, and game listings.
 - Optimized database queries and indexing strategies, reducing page load times by 20% and improving overall responsiveness.
-

CERTIFICATIONS

AWS Certified Cloud Practitioner ([CLF-C02](#)) | April 2026

EDUCATION

Borough Of Manhattan Community College – Associate of Science in Computer Science | New York, NY

Coding Dojo – Full-Stack Development Certificate (Python, Java, MERN Stack)
